IGCSE 0607 Practice Questions — E9.2

Relative and expected frequencies

Total Questions: 6 — **Total Marks:** 39 Marks

Table of Contents & Quick Navigation

- **E9.2** Relative and expected frequencies
  → **Paper 2 (Non-Calculator)** *(2 Qs)* · **Paper 4 (Calculator)** *(4 Qs)*

---

1 A biased five-sided spinner is numbered 1, 2, 3, 4, and 5.
The table shows the probability of the spinner landing on each number.

Number	1	2	3	4	5
Probability	0.15	0.25	x	0.2	$3x$

(a) Work out the value of x.

$x =$ ..... **[2]**

(b) The spinner is spun 250 times.
Calculate the expected number of times the spinner lands on a number greater than 3.

..... **[2]**

2 A researcher records the colours of cars passing a checkpoint.
Over one week, 800 cars pass the checkpoint.
The frequencies of the colours are shown in the table.

Colour	Silver	Black	White	Other
Frequency	260	180	w	$w + 40$

(a) Find the relative frequency of a car being Silver.
Give your answer as a fraction in its simplest form.

..... **[2]**

(b) Find the value of w.

$w =$ ..... **[2]**

(c) The researcher uses these results to estimate the probability that the next car passing the checkpoint is White.
Work out this estimate.

..... **[1]**

(d) In one month, 12000 cars are expected to pass the checkpoint.
Calculate the expected number of Black cars.

..... **[2]**

3 A biased four-sided spinner is numbered 1, 2, 3 and 4.
The table shows the probability of scoring each number.
The spinner is spun 400 times.
Let E_1 be the expected number of times the spinner lands on 1.
Let E_3 be the expected number of times the spinner lands on 3.
You are given that $E_1 \times E_3 = 5600$.
Also, the probability of scoring a 3 is greater than the probability of scoring a 1.

Score	1	2	3	4
Probability	x	$2x$	y	y

(a) Show that $300x^2 - 100x + 7 = 0$.

[3]

(b) Solve the equation to find the value of x and the value of y.

$x =$ ..... , $y =$ ..... **[4]**

(c) Calculate the expected number of times the spinner lands on an even number.

..... **[2]**

4 A spinner has four colours: Red, Blue, Green, and Yellow.
A student spins it 50 times and records the results.
The table shows the relative frequencies for three of the colours.

Colour	Red	Blue	Green	Yellow
Relative frequency	0.15	0.45	0.10	x

(a) Find the value of x.

$x =$ ..... **[1]**

(b) The spinner is spun 300 times in total.
Estimate the number of times it lands on Blue.

..... **[2]**

(c) The spinner is meant to be fair.
Comment on whether the results show it is fair or biased.

..... **[1]**

5 A biased four-sided die is rolled 60 times.
The scores are 1, 2, 3, and 4.
The frequencies of each score are shown in the table.

Score	1	2	3	4
Frequency	x	$2x + 5$	$3x - 2$	$x + 8$

(a) Find the value of x.

$x =$ ..... **[2]**

(b) Find the relative frequency of rolling a 3.

..... **[1]**

(c) The die is rolled 1200 times.
Calculate the expected number of times it rolls a 2.

..... **[2]**

6 Two biased coins, Coin A and Coin B, are tossed.
The probability of Coin A landing on Heads is p.
The probability of Coin B landing on Heads is $p + 0.15$.
Coin A is tossed 300 times and Coin B is tossed 200 times.
The total expected number of Heads from these 500 tosses is 255.

(a) Form an equation in p and show that $p = 0.45$.

[3]

(b) Both coins are tossed together 1000 times.
Work out the expected number of times they land on different outcomes.

..... **[3]**

(c) In a new experiment, Coin A is tossed N times.
The relative frequency of landing on Heads is 0.48 and it lands on Heads 72 times.

(i) Work out the value of N.

$N =$ ..... **[2]**

(ii) Calculate the expected number of Tails in these N tosses, using the theoretical probability $p = 0.45$.

..... **[2]**
