---

1 Answer the following questions about the symmetry of two-dimensional shapes.

(a) Write down the number of lines of symmetry of a regular nonagon (a polygon with 9 sides).

..... **[1]**

(b) Write down the order of rotational symmetry of a parallelogram.

..... **[1]**

(c) Write down the mathematical name of a triangle that has exactly 1 line of symmetry and rotational symmetry of order 1.

..... **[1]**

2 Answer the following questions about 2D symmetry.

(a) Write down the order of rotational symmetry of a regular decagon.

..... **[1]**

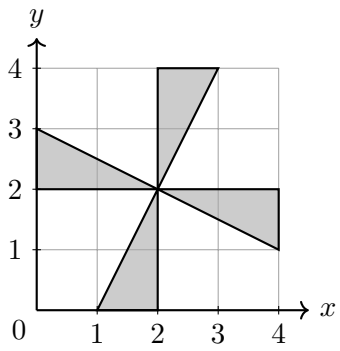

(b) A quadrilateral has exactly two lines of symmetry and rotational symmetry of order 2.
State the mathematical name of this quadrilateral.

..... **[1]**

(c) A shape has rotational symmetry of order 5.
Calculate the smallest angle of rotation that maps the shape onto itself.

..... ° **[1]**

3 The diagram shows a shaded shape on a coordinate grid.

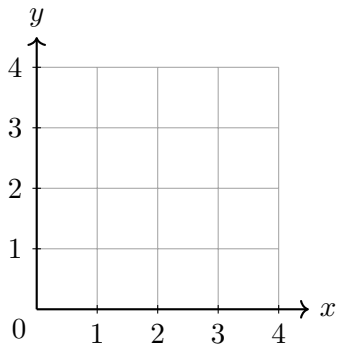

(a) Write down the order of rotational symmetry of the shaded shape.

..... **[1]**

(b) Write down the number of lines of symmetry of the shaded shape.

..... **[1]**

(c) On the grid below, draw the image of the shape after a reflection in the line $x = 2$.

[2]

4 Write down the symmetry properties for the following geometric shapes.

(a) A regular polygon has 15 sides.

Write down:

(i) the number of lines of symmetry,

..... **[1]**

(ii) the order of rotational symmetry.

..... **[1]**

(b) A quadrilateral has exactly two lines of symmetry and rotational symmetry of order 2.

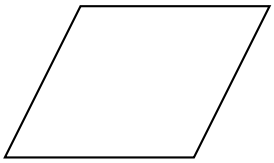

Write down the mathematical name of this quadrilateral.

..... **[1]**

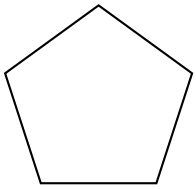

(c) Write down the number of planes of symmetry of a solid right pyramid with a regular pentagonal base.

..... **[1]**

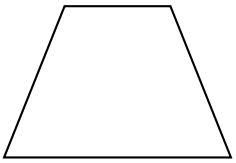

5 Three 2D shapes are shown below.

Parallelogram

Regular Pentagon

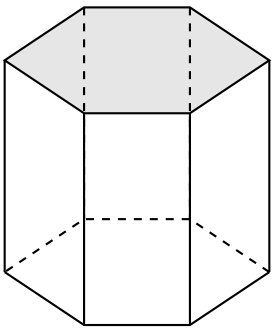

Isosceles Trapezium

Complete the table to show the number of lines of symmetry and the order of rotational symmetry for each shape.

[6]

6 The diagram shows a solid regular hexagonal prism.

(a) Write down the number of planes of symmetry of this regular hexagonal prism.

..... **[2]**

(b) Write down the order of rotational symmetry of the prism about the vertical axis passing through the centres of its hexagonal faces.

..... **[1]**

(c) A different solid is a right square-based pyramid.

Write down the number of planes of symmetry of this pyramid.

..... **[1]**

7 Consider the symmetry properties of the following 3D solid shapes.

(a) A right square-based pyramid has a base of side length 8 cm and perpendicular height 10 cm.
Write down the number of planes of symmetry for this pyramid.

..... **[1]**

(b) Write down the total number of planes of symmetry of a solid regular pentagonal prism.

..... **[2]**

(c) A right circular cone has base radius r and slant height l.
Describe fully its axis of symmetry.

..... **[2]**

8 The points $A(1, 6)$ and $B(7, 4)$ are two vertices of a quadrilateral $ABCD$.
The point $M(3, 2)$ is the centre of rotational symmetry of $ABCD$.
The quadrilateral $ABCD$ has rotational symmetry of order 4.

(a) Find the coordinates of C.

(..... , ...) **[2]**

(b) The line AC is a line of symmetry of the quadrilateral.

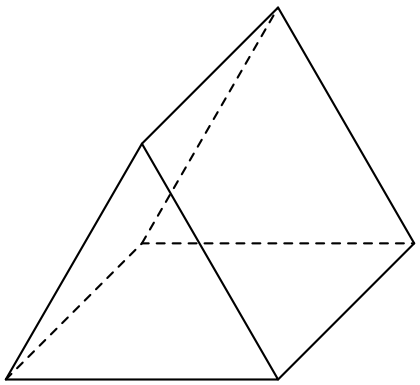

Find the equation of the line AC.
Give your answer in the form $y = mx + c$.

$y =$ ..... **[3]**

(c) Calculate the exact area of the quadrilateral $ABCD$.

..... **[3]**

9 The diagram shows a solid right prism.
The cross-section of the prism is an equilateral triangle.

(a) State the number of planes of symmetry of this solid prism.

..... **[2]**

(b) State the order of rotational symmetry of the prism about the axis passing through the centroids of the two equilateral triangular faces.

..... **[1]**

(c) A different solid is a right regular hexagonal prism.

State the number of planes of symmetry of this hexagonal prism.

..... **[2]**

10 **(a)** A regular polygon has an exterior angle of 15°.

(i) Calculate the number of sides of this polygon.

..... **[2]**

(ii) Write down the number of lines of symmetry of this polygon.

..... **[1]**

(b) Write down the mathematical name of a quadrilateral that has exactly 1 line of symmetry and rotational symmetry of order 1.

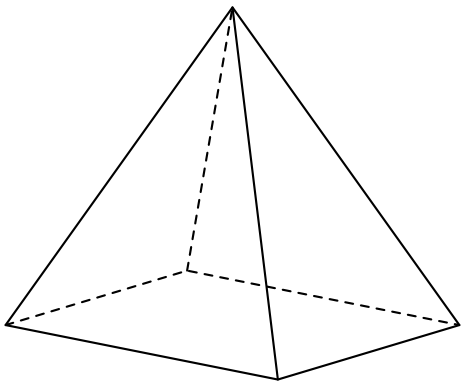

..... **[1]**

(c) A solid cone has a base radius of 5 cm and a perpendicular height of 12 cm.

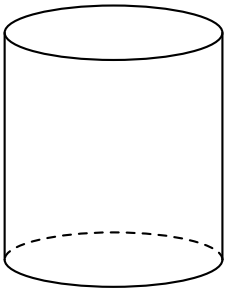

State the number of planes of symmetry of this cone.

..... **[1]**

11 The diagram shows a solid square-based pyramid and a solid cylinder.

Square-based pyramid

Cylinder

(a) State the number of planes of symmetry for each solid.

(i) The solid square-based pyramid.

..... **[1]**

(ii) The solid cylinder.

..... **[1]**

(b) A solid square-based pyramid has a base side length of 6 cm.
The pyramid has exactly 4 planes of symmetry and its volume is 48 cm^3.
Calculate the length of a sloping edge of this pyramid.

..... cm **[5]**

12 A rhombus $ABCD$ has its centre at the origin $(0, 0)$.

(a) The line of symmetry passing through vertices A and C has the equation $y = 3x$.
Find the equation of the line of symmetry passing through vertices B and D.

$y =$ ..... **[2]**

(b) Write down the order of rotational symmetry of the rhombus $ABCD$.

..... **[1]**

(c) A different shape is a regular polygon with n sides.
The number of lines of symmetry of this polygon is equal to n.
The interior angle of this polygon is $165°$.

Calculate the value of n.

$n =$ ..... **[3]**

13 **(a)** A solid wooden block is in the shape of a right prism.
The cross-section of the prism is a regular octagon.

(i) Write down the order of rotational symmetry of the cross-section.

..... **[1]**

(ii) State the total number of planes of symmetry of this right prism.

..... **[2]**

(b) A different solid is a right pyramid with a regular polygon of n sides as its base.
The pyramid has exactly 12 planes of symmetry.

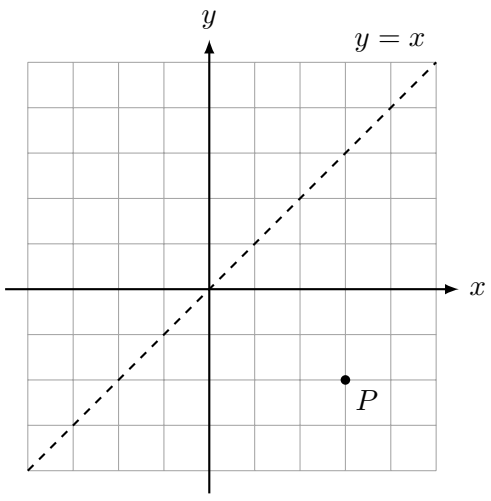

(i) Write down the value of n.

$n =$ ..... **[1]**

(ii) Calculate the sum of the interior angles of the base of this pyramid.

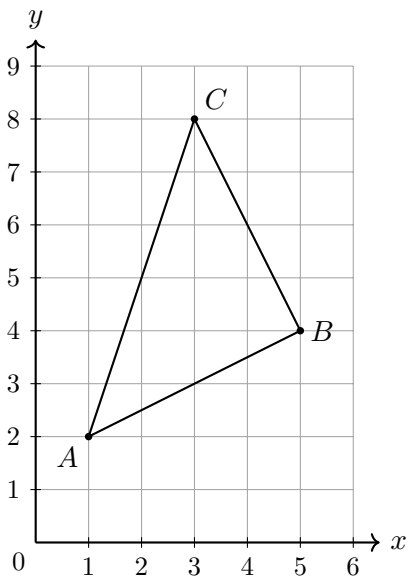

..... ° **[2]**

(c) A shape S is drawn on a coordinate grid.
The shape S has a line of symmetry with equation $y = x$.
One vertex of the shape is at the point $P(3, -2)$.
Write down the coordinates of the image of P after a reflection in this line of symmetry.

(..... , ...) **[2]**

14 Triangle ABC has vertices at $A(1, 2)$, $B(5, 4)$ and $C(3, 8)$.

(a) Show that triangle ABC is an isosceles triangle.

[3]

(b) Triangle ABC has exactly one line of symmetry.
Find the equation of this line of symmetry.
Give your answer in the form $y = mx + c$.

$y =$ ..... **[4]**

(c) A different shape is a regular polygon with n sides.
It has exactly 15 lines of symmetry.
Calculate the size of one interior angle of this polygon.

..... ° **[2]**

15 A right solid prism has a uniform cross-section which is a regular polygon with n sides.
The prism has exactly 7 planes of symmetry.
The length of the prism is not equal to its width.

(a) Explain why $n = 6$.

[2]

(b) The longest diagonal of the hexagonal cross-section is 12 cm.
The volume of the prism is 450 cm^3.

(i) Calculate the length of the prism.

..... cm **[4]**

(ii) Calculate the total surface area of the prism.

..... cm^2 **[4]**
