IGCSE 0607 Practice Questions — E10.2

Interpreting statistical data

Total Questions: 9 — **Total Marks:** 52 Marks

Table of Contents & Quick Navigation

- **E10.2** Interpreting statistical data
  → **Paper 2 (Non-Calculator)** *(4 Qs)* · **Paper 4 (Calculator)** *(5 Qs)*

---

1 The number of goals scored by Team A in each of their last 6 matches is recorded below.

3 1 0 4 2 2

Team B also played 6 matches.
For Team B, the median number of goals scored was 1.5 and the range was 5.

(a) Work out the median and the range of the number of goals scored by Team A.

Median = ... , Range = ... **[2]**

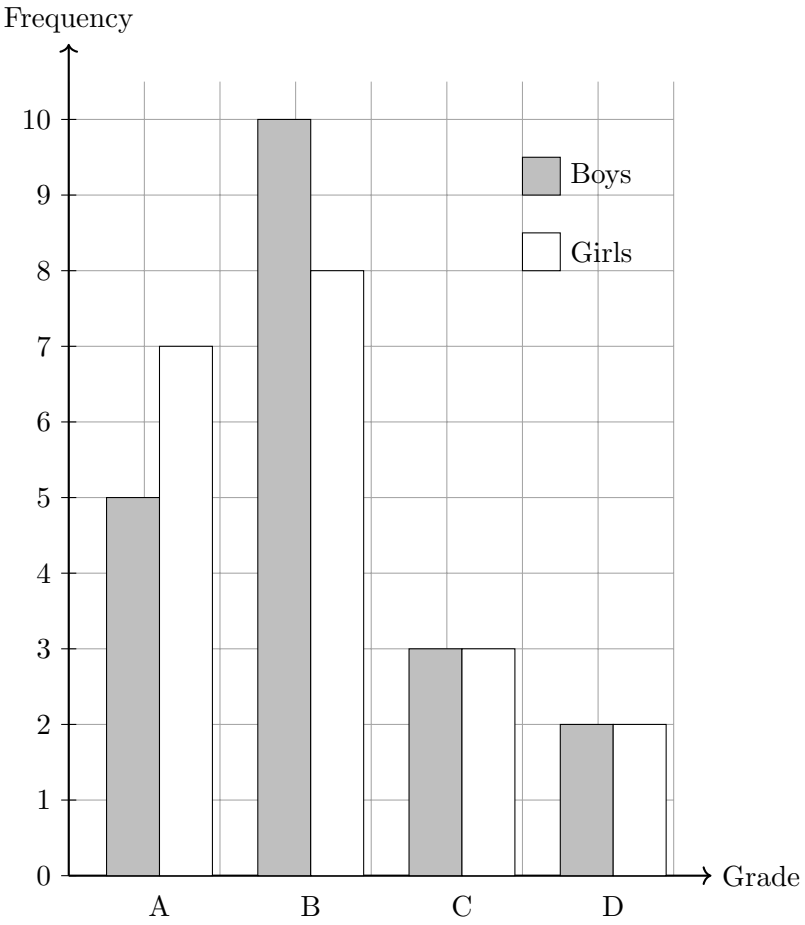

(b) Make two comments comparing the performance of Team A with the performance of Team B.

.....

.....

..... **[2]**

2 The dual bar chart shows the grades achieved by a group of boys and a group of girls in an examination.

(a) Write down the modal grade for the boys.

..... **[1]**

(b) Find the number of girls who scored Grade C.

..... **[1]**

(c) Calculate the percentage of all students who scored Grade A.

..... % **[2]**

3 The stem-and-leaf diagram shows the ages, in years, of 15 members of a chess club.

1	2 5 8
2	0 1 1 4 7 9
3	2 5 6 9
4	1 3

Key: 2 | 1 represents 21 years

(a) Find the median age.

..... years **[1]**

(b) Find the range of the ages.

..... years **[1]**

(c) Find the interquartile range.

..... years **[2]**

(d) A member is chosen at random.
Find the probability that they are older than 30 years.

..... **[1]**

4 A set of 5 integers has the following statistical properties:

- Mode = 3
- Median = 7
- Mean = 8
- Range = 11

(a) Find the 5 integers.

..... **[4]**

(b) A sixth integer, x, is added to the set.
The new mean is 9.
Work out the value of x.

$x =$ ..... **[2]**

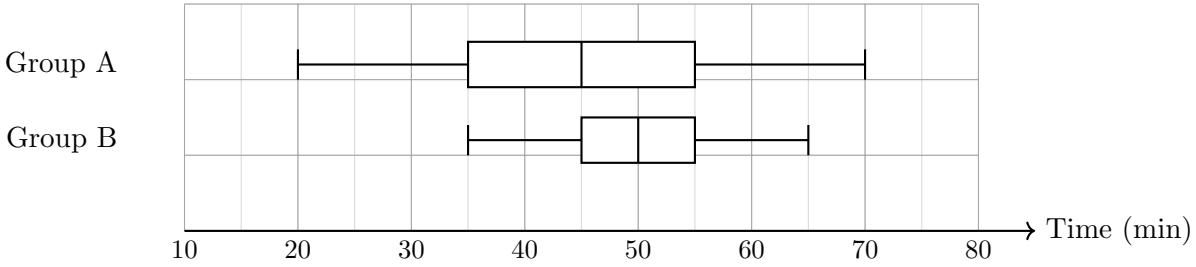

(c) A student claims: "If another completely different set of 5 integers has the same range of 11, it must also have the same standard deviation."

State whether the student is correct.
Give a statistical reason for your answer.

.....

..... **[1]**

5 The box-and-whisker plots show information about the times, in minutes, taken by two groups of students, Group A and Group B, to complete a mathematics test.

(a) Write down the median time for Group A.

..... minutes **[1]**

(b) Work out the interquartile range for Group B.

..... minutes **[1]**

(c) Make two comments comparing the distributions of the times taken by Group A and Group B.

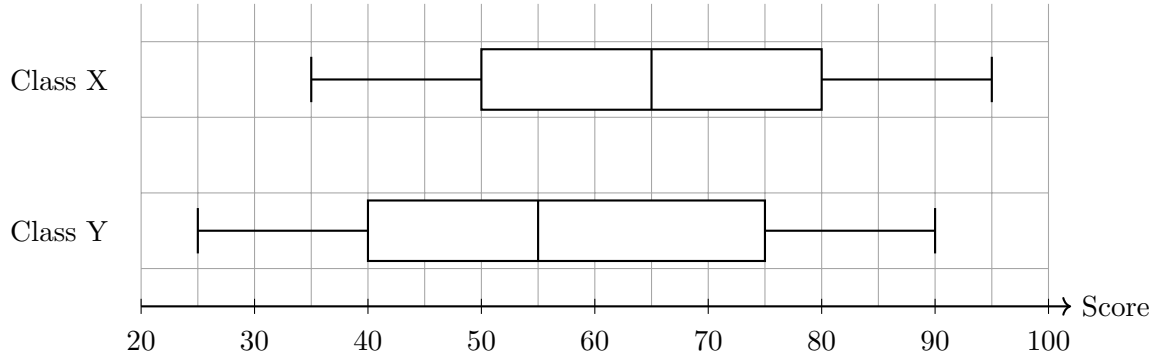

Comment 1:

Comment 2: **[2]**

(d) Group A has 80 students.
Estimate the number of students in Group A who took longer than 55 minutes.

..... students **[2]**

6 The box-and-whisker plots show the distribution of test scores for two classes, Class X and Class Y.

(a) Write down the median score for Class X.

..... **[1]**

(b) Work out the interquartile range for Class Y.

..... **[2]**

(c) Make two different comments comparing the distribution of test scores in Class X with Class Y.

[2]

(d) A student states: "Because the median score for Class X is higher, every student in Class X scored more than every student in Class Y."

Is this statement correct?
Give a statistical reason for your answer.

.....

..... **[1]**

7 The table shows information about the mass, m grams, of 60 mangoes collected by a farmer.

Mass (m grams)	$100 < m \leq 120$	$120 < m \leq 140$	$140 < m \leq 160$	$160 < m \leq 180$	$180 < m \leq 200$
Frequency	10	20	15	10	5

(a) State the modal class.

..... **[1]**

(b) Calculate an estimate of the mean mass of the mangoes.

..... g **[4]**

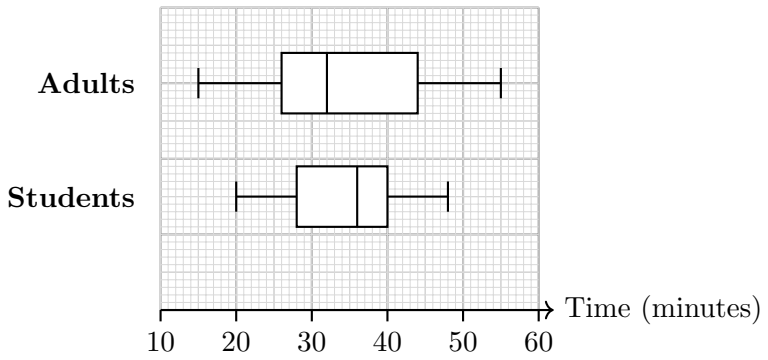

(c) The farmer states that exactly 15 mangoes have a mass of 150 grams because 150 is the midpoint of the class $140 < m \leq 160$.
Explain why the farmer's reasoning is incorrect.

.....

.....

..... **[2]**

8 The box-and-whisker plots show information about the times, in minutes, taken by a group of Adults and a group of Students to complete a logic puzzle.

(a) Use the diagram to find the interquartile range of the times taken by the Adults.

..... minutes **[2]**

(b) Make two different statements comparing the distribution of the times taken by the Adults with the times taken by the Students.

.....

.....

..... **[2]**

(c) A student claims: "Because the range of the Students' times is smaller, this proves that every student completed the puzzle faster than the slowest Adult."

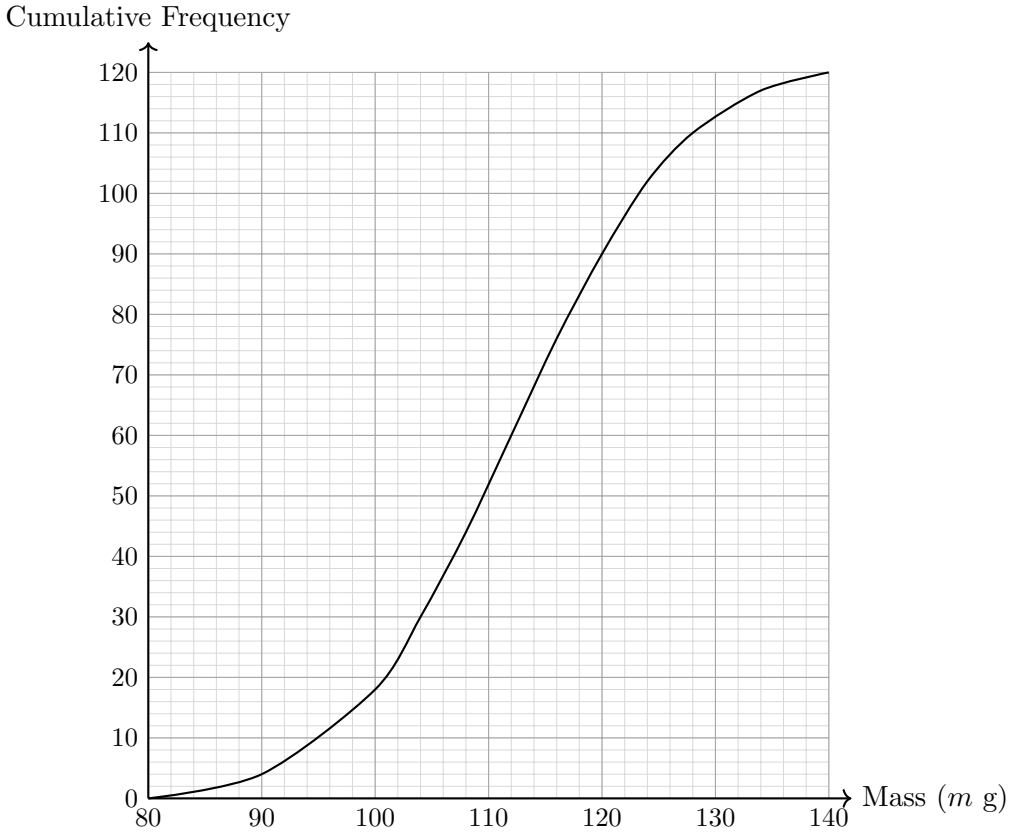

Comment on the validity of this reasoning.

.....

.....

..... **[2]**

9 The cumulative frequency curve shows information about the masses, m grams, of 120 apples from Farm X.

(a) Use the graph to find an estimate for the median mass.

..... g **[1]**

(b) Use the graph to find an estimate for the interquartile range.

..... g **[2]**

(c) Apples with a mass greater than 128 g are classed as Large.
Find the percentage of these apples that are Large.

..... % **[2]**

(d) 120 apples from Farm Y have a median mass of 105 g and an interquartile range of 22 g.
Compare the distribution of the masses of the apples from Farm X and Farm Y.

.....

..... **[2]**
