IGCSE 0607 Practice Questions — E7.2

Right-angled triangles

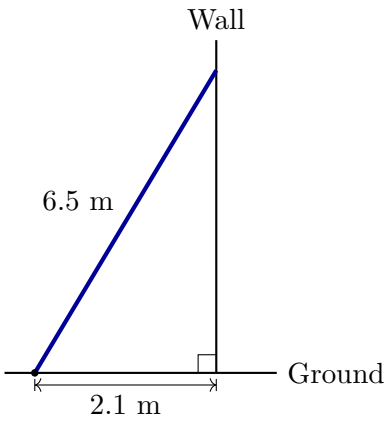

Total Questions: 6 — **Total Marks:** 48 Marks

Table of Contents & Quick Navigation

- **E7.2** Right-angled triangles
  → **Paper 4 (Calculator)** *(6 Qs)*

---

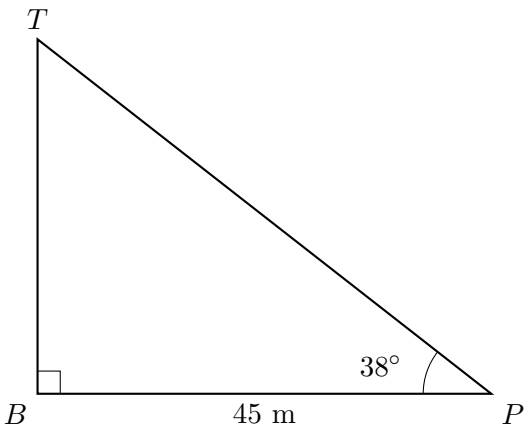

1 A straight ladder of length 6.5 m leans against a vertical wall.
The base of the ladder is 2.1 m from the bottom of the wall on horizontal ground.

Calculate the angle the ladder makes with the horizontal ground.

..... ° **[3]**

2 A surveyor stands at a point P, which is 45 m away from the base, B, of a vertical tower TB. The angle of elevation of the top of the tower, T, from P is 38°.

(a) Calculate the height of the tower, TB.

..... m **[2]**

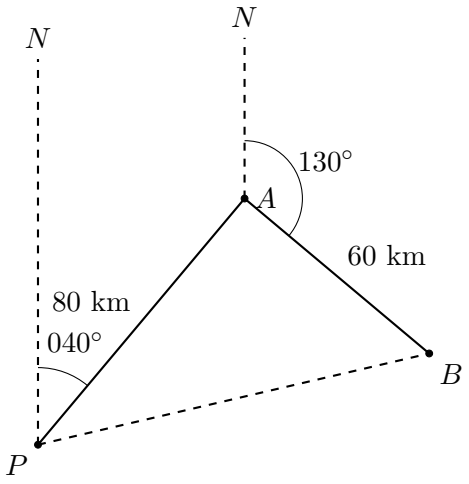

(b) Calculate the straight-line distance PT.

..... m **[2]**

(c) A bird sits at a point X on the tower, where $BX = 20$ m.
Calculate the angle of elevation of the bird from P.

..... ° **[3]**

3 A ship sails from port P on a bearing of 040° for 80 km to point A.
It then changes course and sails on a bearing of 130° for 60 km to point B.

(a) Calculate the direct distance from P to B.

$PB =$ ..... km **[3]**

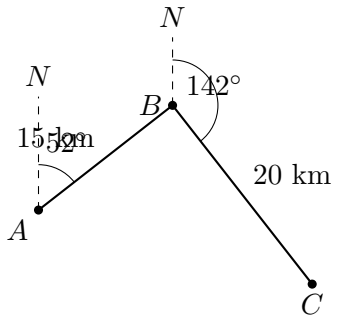

(b) Calculate the bearing of B from P.

Bearing = ... ° **[3]**

(c) Calculate the shortest distance from point A to the path PB.

..... km **[3]**

4 A ship sails from port A to point B on a bearing of 052° for 15 km.
It then sails from point B to point C on a bearing of 142° for 20 km.

(a) Show that angle $ABC = 90°$.

[2]

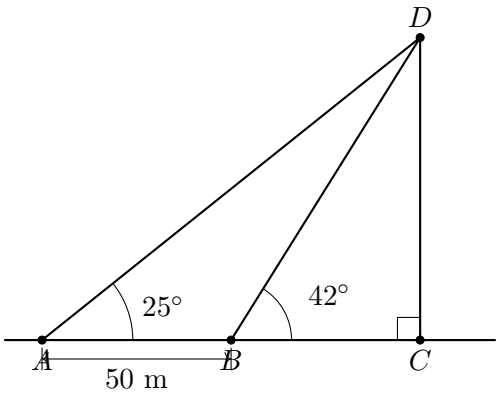

(b) Calculate the distance AC.

..... km **[3]**

(c) Calculate the bearing of C from A.

..... ° **[4]**

5 Point A and point B are on horizontal ground, in a straight line with the base C of a vertical building CD.
The distance between A and B is 50 m.
The angle of elevation of the top of the building, D, from A is 25° and from B is 42°.

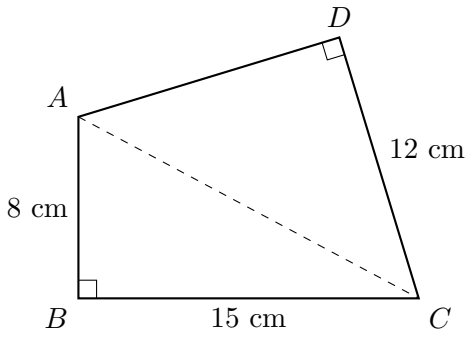

(a) Calculate the height of the building CD.

$CD =$ ..... m **[5]**

(b) A bird flies directly along the straight path from A to D.
Calculate the shortest distance from point B to the flight path AD.

..... m **[3]**

6 The diagram shows a quadrilateral $ABCD$.
Angle $ABC = 90°$ and angle $ADC = 90°$.
$AB = 8$ cm, $BC = 15$ cm, and $CD = 12$ cm.

(a) Calculate the length of AC.

..... cm **[2]**

(b) Calculate the length of AD.

..... cm **[3]**

(c) Calculate the shortest distance from D to the line AC.

..... cm **[3]**

(d) Calculate the size of angle DAB.

..... ° **[4]**
