1 Event A is that a train arrives on time.

$P(A) = 0.83$

(a) Work out $P(A')$.

..... **[1]**

(b) State in words what the event A' represents.

..... **[1]**

2 A biased spinner can land on 1, 2, 3, 4, or 5.
The table shows the probabilities of the spinner landing on each of the numbers.

Outcome	1	2	3	4	5
Probability	0.15	$2x$	0.31	x	0.24

(a) Find the value of x.

$x =$ ..... **[2]**

(b) The spinner is spun once.
Find the probability that it does not land on 2.

..... **[2]**

3 A biased spinner can land on 1, 2, 3 or 4.
The table shows the probabilities of the spinner landing on each number.

Number	1	2	3	4
Probability	$\frac{1}{5}$	0.35	x	$2x$

(a) Work out the value of x.

$x =$ ..... **[2]**

(b) Find the probability that the spinner does not land on 4.

..... **[2]**

4 A bag contains only red counters, blue counters, and green counters.
The number of red counters is x^2.
The number of blue counters is $3x$.
The number of green counters is 2.

(a) Write down an expression, in its simplest form, for the total number of counters in the bag.

..... **[1]**

(b) A counter is chosen at random.
The probability that it is red is $\frac{8}{15}$.
Show that $7x^2 - 24x - 16 = 0$.

[2]

(c) Solve the equation $7x^2 - 24x - 16 = 0$ to find the value of x.

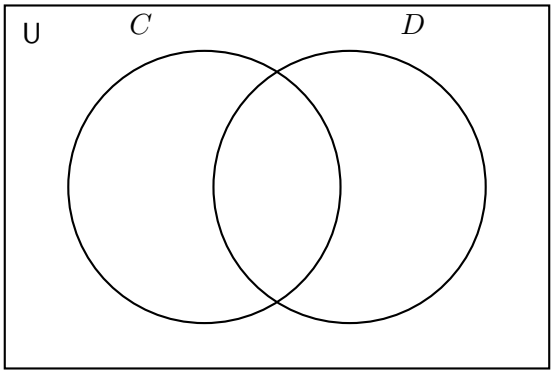

$x =$ ..... **[3]**

(d) Find the probability that a randomly chosen counter is not blue.
Give your answer as a fraction in its simplest form.

..... **[2]**

5 A group of 120 people were asked about the pets they own.
$C = \{\text{people who own a cat}\}$
$D = \{\text{people who own a dog}\}$
$n(\mathsf{U}) = 120$
$n(C) = 55$
$n(D) = 68$
18 people own neither a cat nor a dog.

(a) Complete the Venn diagram to show the number of people in each region.

[3]

(b) A person is chosen at random.
Find $P(C \cap D)$.

..... **[1]**

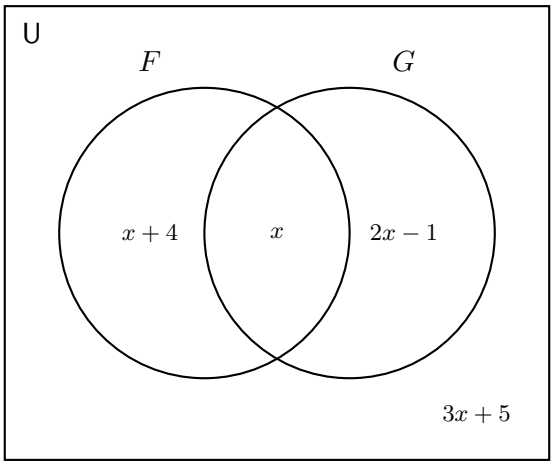

(c) Find $P(D')$.

..... **[2]**

(d) Find the probability that a person chosen at random owns a cat or a dog, but not both.

..... **[2]**

6 The Venn diagram shows information about the number of students in a class of 50 who study French (F) and German (G).

(a) Work out the value of x.

$x =$ ..... **[2]**

(b) A student is chosen at random.
Find $P(F')$.
